Sprint Report

This week's sprint was productive with most tasks complete, and a good improvement over the previous sprint, where many tasks were not complete on time. To make up ground for last week's sprint, we increased our planned sprint velocity this week, and even managed to complete some tasks ahead of schedule for part of the week. The remaining tasks in progress should be merged in the next sprint.

Alex: Partially completed validators for some inputs but haven't pushed yet due to needing further discussion about the database.

David: Added the result processing functions and may have to change them later incase the column/attribute names change in the future.

Gavin: Completed finding the class average for the assignment, but have to test it to make sure it works as intended. Will merge with master once it works properly with the current database.

Jason: Made a screen for the student to view assignments, where questions are loaded from the database. The particular assignment loaded from database is hard-coded for now, until the assignment selection screen is completed (planned for next sprint)

Mathu: Completed uploading a csv file of students to a database and showing a table of students on the GUI.
